## DETAILED ACTION

### *Allowable Subject Matter*

1. **Claims 13, 15-19, 21 and 22** are allowed.
2. The following is an examiner's statement of reasons for allowance:

**In terms of claim 13**, the prior art of record does not teach alone or in combination a method for locating a metallic object or for identifying defects thereon comprising a demodulating step, wherein said demodulating step comprises multiple demodulating of the received signal using the computer and the Fourier or wavelet transformation method, wherein said calculating step also comprises calculating of a spectrum when the at least one of associated magnitude values and phase values are calculated for frequencies of the carrier signal and wherein at least one additional frequency component of said spectrum is used with the calculated at least one of the magnitude and phase values as said direct measure one of the present signal strength vector and phase angle of the demodulated received signal, in combination with all other elements in claim 13.

**As to claims 15-17**, the claims are allowed as they further limit allowed claim 1.

**In terms of claim 19**, the prior art of record does not teach alone or in combination a method for locating a metallic object or for identifying defects thereon comprising a step of using the calculated at least one of an associated magnitude and phase value as a direct measure of one of a present signal strength and a phase angle of the demodulated received signal, wherein intermittent data acquisition is performed

Art Unit: 2829

with less than 1 sample being detected and processed per full wave of the carrier signal, in combination with all other elements in claim 19.

**In terms of claim 21**, the prior art of record does not teach alone or in combination a method for locating a metallic object or for identifying defects thereon comprising the step of digitally filtering at least one of the signal to be demodulated and the harmonics thereof, wherein the digitally filtering is a digital low-pass filtering effect is provided for the demodulated signal using a mathematically assigned digital low-pass filter that has a width that is varied as a function of the number of digitally determined measured values being fed to a respective Fourier or wavelet transformation, so that a small number of measured values effects a larger filter width and a larger number of measured values effects a smaller filter width of the mathematically assigned digital low-pass filter, in combination with all other elements in claim 21.

**As to claims 22**, the claims are allowed as they further limit allowed claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2829

**Conclusion**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
